

1. Install docker commands: (run as root user) → whoami

```
# yum install -y yum-utils
```

```
# yum-config-manager --add-repo https://download.docker.com/linux/centos/docker-ce.repo
```

- docker-ce
- docker-ce-cli
- containerd.io
- docker-buildx-plugin
- docker-compose-plugin

```
# yum repolist
```

```
# yum install -y docker-ce docker-ce-cli containerd.io docker-buildx-plugin docker-compose-plugin
```

```
# which docker
```

2. verify if docker is running, else start it.

```
# systemctl status docker
```

```
# systemctl start docker
```

```
# systemctl enable docker
```

```
# systemctl status docker
```

3. verify docker image & container status

```
# docker info
```

4. checking images

listing images

```
[root@docmaster ~]# docker images
```

REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
------------	-----	----------	---------	------

```
[root@docmaster ~]# docker image ls
```

REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
------------	-----	----------	---------	------

5. downloading the image(s)

```
# docker pull ubuntu //this downloads latest ubuntu version
```

```
# docker pull ubuntu:18.04 //this downloads specific ubuntu version
```
