

Turn off all the VMs that are running under VMWare Workstation

1. Use Linux VM & set the following details & verify:
 - a. Network adapter: Lan segment (create a new segment – week1demo)
 - b. Hostname: server01.wipro.com
 - c. IP Address: 192.168.10.10 (static)
 - d. Subnet mask: 255.255.255.0
 - e. Default gateway: 192.168.10.1
 - f. DNS: 8.8.8.8
2. Use current windows server and configure the following:
 - a. Network adapter: Lan segment (create a new segment – week1demo)
 - b. Hostname: winsvr.wipro.com
 - c. IP Address: 192.168.10.11 (static)
 - d. Subnet mask: 255.255.255.0
 - e. Default gateway: 192.168.10.1
 - f. DNS: 8.8.8.8
3. Ping the 2 machines from each other.
4. Use NMAP tool to find the details of the target (windows machine).
5. Install IIS webserver role on windows machine, uninstall if the role is already installed.
6. Use SSH command from windows server to connect to linux machine using powershell.
7. Create MD5 hash for the text “Wipro” using the appropriate website.
8. You need to run 10 linux ubuntu machine on azure for 2 months. Calculate the estimate cost for:
 - a. 10 Linux VMs
 - b. Duration: 2 months (60 days)
 - c. Location: East US
 - i. Rest values can be taken as default.
