

Command-line argument	Description
<code>--verbose</code>	Logging operation to the console
<code>--mode</code>	Encryption mode: <i>fast</i> - Encrypt 5% from entire file; <i>medium</i> - Encrypt 15% from entire file (default); <i>slow</i> - Encrypt 25% from entire file; <i>entire</i> - Encrypt 100% from entire file
<code>--file <file path></code>	Target encrypt a file or list of files
<code>--dir <dir path></code>	Target encrypt a directory or list of directories
<code>--help</code>	Print the usage prompt to the console
<code>--esxi</code>	Terminate all ESXI VMs
<code>--delay <minutes></code>	Sleep for a number of minutes prior to encryption
<code>--fork</code>	Daemonize the current malware process to run in the background
<code>--motd</code>	Update the message of the day

If the command-line argument `--verbose` is provided, the malware prints the following command-line argument setting to the console:

Settings:

```
[<+/->] Enable verbosity
[<+/->] Force stop all ESXi VMs
[<+/->] Delay encryption for <delay time> minutes
[<+/->] Fork process
[<+/->] Update "Message of the day"
```
