

On azure VM:

```
PS C:\Users\jeetu> auditpol /get /subcategory:"Process Creation"
System audit policy
Category/Subcategory          Setting
Detailed Tracking
    Process Creation          Success
PS C:\Users\jeetu> |
```

On my system → SCRIPT WON'T RUN.

```
PS C:\WINDOWS\system32> auditpol /get /subcategory:"Process Creation"
System audit policy
Category/Subcategory          Setting
Detailed Tracking
    Process Creation          No Auditing
```

On RPS lab:

The screenshot shows a PowerShell script editor with two tabs: 'Untitled1.ps1*' and 'live_monitoring.ps1'. The 'live_monitoring.ps1' tab is active, and it contains a single line of code: `1 auditpol /get /subcategory:"Process Creation"`. A cursor is positioned at the end of the line.

```
[+] Monitoring Event ID 4688 (Polling Mode)...
PS C:\windows\system32> auditpol /get /subcategory:"Process Creation"
System audit policy
Category/Subcategory          Setting
Detailed Tracking
    Process Creation          No Auditing
PS C:\windows\system32>
```

Need to enable (as admin)

```
auditpol /get /subcategory:"Process Creation"
```

```
auditpol /set /subcategory:"Process Creation" /success:enable
```

```
auditpol /set /subcategory:"Process Termination" /success:enable
```

```
#auditpol /set /subcategory:"Detailed Tracking" /success:enable|
```

```
auditpol /get /subcategory:"Process Creation"
```

```
auditpol /set /subcategory:"Process Creation" /success:enable
```

```
auditpol /set /subcategory:"Process Termination" /success:enable
```

```
auditpol /set /subcategory:"Detailed Tracking" /success:enable
```
